# Quality of Rum

"This is a very pretty honey coloured rum that has a fabulous honeycomb aroma. There is a really impressive flavour profile with tropical fruits, pineapple, caramel, butterscotch and white pepper all exploding in the mouth and continuing into a really long finish alongside a slightly sweet saline note. The combination works well producing a party on the palate. Brilliantly thought through and well executed."

## COMPARISON OF CO<sub>2</sub> REMOVAL APPROACHES

\*BECCS and afforestation both put biodiversity and food security at risk when deployed on a large scale because of significant land-use requirements. Albedo refers to a temperature increase effect caused by the low reflectivity of forest and agriculture areas. Enhanced weathering comes at the price of altered water chemistry such as rising pH values in rivers.
